The 8th International Conference on Cryptology and Network Security (CANS 2009) was held at the Ishikawa Prefectural Museum of Art in Kanazawa,Japan, during December 12–14, 2009. The conference was jointly co-organized by the NationalInstituteofAdvancedIndustrialScienceandTechnology(AIST),Japan, and the Japan Advanced Institute of Science and Technology (JAIST). In ad- tion, the event was supported by the Special Interest Group on Computer Se- rity (CSEC), IPSJ, Japan, the Japan Technical Group on Information Security (ISEC), IEICE, the Japan Technical Committee on Information and Com- nication System Security(ICSS), IEICE, and the Society of Information Theory and its Applications (SITA), Japan, and co-sponsored by the National Ins- tute of Information and Communications Technology, Japan, ComWorth Co. , LTD, Japan, Hitachi, Ltd. , Hokuriku Telecommunication Network Co. ,Inc. , and Internet Initiative Japan Inc. The conference received 109 submissions from 24 countries, out of which 32 were accepted for publication in these proceedings. At least three Program Committee (PC) members reviewed each submitted paper, while submissions co-authored by a PC member were submitted to the more stringent evaluation of ?ve PC members. In addition to the PC members, many external reviewers joinedthereviewprocessintheirparticularareasofexpertise. Wewerefortunate to have this energetic team of experts, and are deeply grateful to all of them for their hard work, which included a very active discussion phase—almost as long as the initial individual reviewing period. The paper submission, review and discussion processes were e?ectively and e?ciently made possible by the Web-based system iChair.

The 10th Anniversary Edition of 'The Divine Code', now in a beautiful 2-volume set, is ground-breaking in its scope. From history to prophecy, from apologetics to politics, numbers are everywhere but not clearly understood. Steve Cioccolanti has expanded this study of the meaning of numbers to include Donald Trump, Jared Kushner, Benjamin Netanyahu, Kim Clement, Osama bin Laden, the Third Temple, the 7 Noahide Laws, World War III, and much more. That is why it is 'A Prophetic Encyclopedia of Numbers.''The Divine Code' is a carefully researched exploration into the meaning of numbers, codes, cycles and patterns found in Scripture, nature, history, and prophecy. It demystifies familiar numbers like 7, 13, 666 and illuminates lesser known ones like 17, 58 and 708. Years of research and revelation have crafted this spiritual magnum opus that you will find an easy read and a joy to keep. Thought-provoking and highly practical, 'The Divine Code' is brimming with lively topics such as God, angels, demons, healing, dreams, different personalities, and end time prophecy. As you read it, you will fall in love with the Creator of Numbers. Let the Spirit of the Lord show you how to apply numbers to find meaning in life, fulfill your purpose, and prepare for eternity. Pick a chapter and you will find a surprising nugget of truth. As one reviewer raved, "This is the Bible of Numbers." Volume I contains the number range 1 to 25. Volume II contains the number range 26 to 1000. "The Divine Code...is an excellent reference book that is extremely informative, inspirational and practical in every way...This excellent book has reconciled the extremes in doctrines and practices we see all around us, and brings forth the proper balanced Biblical perspective." --PASTOR DENNIS BALCOMBE, Founder of Revival Chinese Ministries International, Missionary to Hong Kong since 1969"Bible Numerics is a subject that will never be exhausted. The Divine Code by Steve Cioccolanti certainly adds to this amazing and fascinating subject." --KEVIN CONNER, Internationally-Recognized Theologian and Author"There is NO OTHER BOOK like 'The Divine Code'...Pastor Cioccolanti is the first pastor I know to highlight God's glory in the Bible through numbers in an entertaining way. I don't think Christians appreciate the importance of numbers. They are afraid that they may be dabbling in Kabbalah or the occult, so this book is ground-breaking in educating people that God created numbers to glorify Him."--LORILYN ROBERTS, Award-Winning Christian Author

Integrated circuit design for biomedical applications requires an interdisciplinary background, ranging from electrical engineering to material engineering to computer science. This book is written to help build the foundation for researchers, engineers, and students to further develop their interest and knowledge in this field. This book provides an overview of various biosensors by introducing fundamental building blocks for integrated biomedical systems. State-of-the-art projects for various applications and experience in developing these systems are explained in detail. Future design trends in this field is also discussed in this book.

This collection of articles represents Professor Williamson Murray's efforts to elucidate the role that history should play in thinking about both the present and the future. They reflect three disparate themes in Professor Murray's work: his deep fascination with history and those who have acted in the past; his fascination with the similarities in human behavior between the past and the present; and his belief that the study of military and strategic history can be of real use to those who will confront the daunting

problems of war and peace in the twenty-first century. The first group of essays addresses the relevance of history to an understanding of the present and to an understanding of the possibilities of the future. The second addresses the possible direct uses of history to think through the problems involved in the creation of effective military institutions. The final group represents historical case studies that serve to illuminate the present.

This book describes in a detailed fashion the application of hybrid intelligent systems using soft computing techniques for intelligent control and mobile robotics. Soft Computing (SC) consists of several intelligent computing paradigms, including fuzzy logic, neural networks, and bio-inspired optimization algorithms, which can be used to produce powerful hybrid intelligent systems. The prudent combination of SC techniques can produce powerful hybrid intelligent systems that are capable of solving real-world problems. This is illustrated in this book with a wide range of applications, with particular emphasis in intelligent control and mobile robotics. The book is organized in five main parts, which contain a group of papers around a similar subject. The first part consists of papers with the main theme of theory and algorithms, which are basically papers that propose new models and concepts, which can be the basis for achieving intelligent control and mobile robotics. The second part contains papers with the main theme of intelligent control, which are basically papers using bio-inspired techniques, like evolutionary algorithms and neural networks, for achieving intelligent control of non-linear plants. The third part contains papers with the theme of optimization of fuzzy controllers, which basically consider the application of bio-inspired optimization methods to automate the de-sign process of optimal type-1 and type-2 fuzzy controllers. The fourth part contains papers that deal with the application of SC techniques in times series prediction and intelligent agents. The fifth part contains papers with the theme of computer vision and robotics, which are papers considering soft computing methods for applications related to vision and robotics.

After a mission of vengeance in Helsinki, James Bond returns to London and assumes the workload of a fallen 00 Section agent. His new mission takes him to Berlin, presumably to break up an agile drug-trafficking operation. But Bond has no idea of the forces ranged in secret against him, the full range of an operation that's much scarier and more lethal than he could possibly imagine. Berlin is about to catch fire... and James Bond is trapped inside. Dynamite Entertainment proudly presents VARGR, the debut storyline in the all-new James Bond comic book series, as crafted by masterful writer Warren Ellis (Transmetropolitan, The Authority) and artist Jason Masters (Batman Incorporated, Guardians of the Galaxy). James Bond is trapped in Los Angeles with a MI6 agent under fire and a foreign intelligence service trying to put them both in bags... and possibly more than one foreign intelligence service. And things may not be any safer in Britain, with bodies dropping and ghosts moving in the political mist..
