

Multinational Business Finance 14th Edition Pearson Series In Finance

Today, a Great Power's arsenal extends well beyond the military, embracing soft power and also currency power. The dollar dominates the global economy, used in settling trade and investment deals but also held in reserve in vast quantities by central banks in case of a payments crisis. This demand for dollars keeps US borrowing costs lower than they otherwise would be, reinforcing the country's economic power and helping to pay for the world's strongest armed forces. This Adelphi sets out how the US has regularly deployed the power of the dollar to put pressure on foes such as Iran, as well as allies including the United Kingdom and Germany. Contributors, including Robert Zoellick, the former head of the World Bank, and John Williamson, a leading expert on currencies, assess how long the US will be able to maintain this 'exorbitant privilege' in tandem with a rising China. Beijing, sensing that the global crisis might herald the end of the dollar's supremacy, is eager to gain monetary power by carving out an international role for its own currency, the renminbi. The book examines the obstacles China must first overcome in its quest and the strategic consequences if it succeeds.

For a century, economists have driven forward the cause of globalization in financial institutions, labour markets, and trade. Yet there have been consistent warning signs that a global economy and free trade might not always be advantageous. Where are the pressure points? What could be done about them? Dani Rodrik examines the back-story from its seventeenth-century origins through the milestones of the gold standard, the Bretton Woods Agreement, and the Washington Consensus, to the present day. Although economic globalization has enabled unprecedented levels of prosperity in advanced countries and has been a boon to hundreds of millions of poor workers in China and elsewhere in Asia, it is a concept that rests on shaky pillars, he contends. Its long-term sustainability is not a given. The heart of Rodrik's argument is a fundamental 'trilemma': that we cannot simultaneously pursue democracy, national self-determination, and economic globalization. Give too much power to governments, and you have protectionism. Give markets too much freedom, and you have an unstable world economy with little social and political support from those it is supposed to help. Rodrik argues for smart globalization, not maximum globalization.
