The effects of trauma and abuse on children can be long-lasting, acute and damaging. Evidence suggests that cognitive behavioural therapy (CBT) is a highly effective form of psychotherapy to help children to overcome these effects. This book uses an evidence-based CBT treatment model to assist children and adolescents aged 9–15 years to resolve trauma symptoms and increase their coping skills. The approach is made up of 16 step-by-step sessions to carry out with the young person, and includes worksheets and fun activities using arts and crafts. The model uses four phases: strengthening the child's psychosocial context; enhancing their coping skills; processing their trauma through gradual exposure; and addressing special issues that the child may have and preventing relapse. The child keeps a scrapbook for the duration of the programme in which they keep worksheets, artwork and any other activities they carry out. The approach is designed for individual therapy but also includes sessions for parents and caregivers. With photocopiable worksheets and easy to follow sessions, this will be an invaluable resource for all practitioners working with traumatised and abused children, including therapists, psychologists, counsellors, health professionals and social workers.

A lifeline for healthcare workers in the midst of moral pain during the COVID-19 crisis On the front line of the COVID-19 response are thousands of healthcare providers working in strained systems with limited resources. Difficult decisions will be part of the experience of working under these circumstances. The moral dilemmas that providers may face in this crisis will undoubtedly lead to moral distress and emotional pain. Providers may have to make decisions about life and death, determining who gets life-saving equipment and attention and who does not. Working long and stressful hours may lead to accidental mistakes, oversights, or inaction. Providers working in overburdened or under-resourced systems may experience a sense of being thwarted in their effort to keep their oath and live their values. For providers who hold values such as service, caring, or protection, these potentially morally injurious events may have lasting consequences. Anger, guilt, and shame may plague those suffering from these seemingly impossible situations. If providers become mired in this moral pain, they may find their personal and professional lives become increasingly burdened by moral injury. The Moral Injury Workbook was developed to facilitate healing for people who have experienced a variety of moral violations and addresses a wide range of moral emotions—from guilt and shame to contempt and anger. It offers a step-by-step program to help readers move beyond their moral pain, reconnect with a fuller sense of self, and re-engage with deeply held values. This workbook is a lifeline for healthcare providers in the midst of moral pain. Oriented toward and guided by values of caring and compassion, the content of this workbook may be meaningfully applied to and engaged in the personal and professional practices of all who read it. The six core processes of acceptance and commitment therapy (ACT) are broadly addressed in the workbook to apply to a range of moral injuries. They may be used in service of the healing needed by those suffering in the presence and aftermath of this pandemic.

This pragmatic workbook offers evidence-based skills grounded in dialectical behavior therapy (DBT) to help you find lasting relief from trauma and post-traumatic stress disorder (PTSD). If you've experienced trauma, you should know that there is nothing wrong with you. Trauma is a normal reaction to an abnormal event. Sometimes, the symptoms of trauma persist long after the traumatic situation has ceased. This is what we call PTSD—in other words, the “trauma after the trauma.” This happens when the aftereffects of trauma—such as anxiety, depression, anger, fear, insomnia, and even addiction—end up causing more ongoing harm than the trauma itself. So, how can you start healing? With this powerful and proven-effective workbook, you'll find practical exercises for overcoming trauma using mindfulness, interpersonal effectiveness, emotion regulation, and distress tolerance. You'll learn how to be present in the moment and identify the things that trigger your trauma. You'll also find activities and exercises to help you cope with stress, manage intense emotions, navigate conflict with others, and change unhealthy thought patterns that keep you stuck. Finally, you'll find practical materials for review and closure, so you can take what you've learned out into the world with you. If you're ready to move past your trauma and start living your life again, this workbook will help guide you, one step at a time. The practical interventions in this guide can be used on their own or in conjunction with therapy.

Post-traumatic stress disorder (PTSD) is an extremely debilitating anxiety condition that can occur after exposure to a terrifying event or ordeal. Although many know that this mental health issue affects

veterans of war, many may not know that it also affects victims of domestic violence, sexual violence, natural disasters, crime, car accidents and accidents in the workplace. No matter the cause of their illness, people with PTSD will often relive their traumatic experience in the form of flashbacks, memories, nightmares, and frightening thoughts. This is especially true when they are exposed to events or objects that remind them of their trauma. Left untreated, PTSD can lead to emotional numbness, insomnia, addiction, anxiety, depression, and even suicide. In *The PTSD Workbook, Second Edition*, psychologists and trauma experts Mary Beth Williams and Soili Poijula outline techniques and interventions used by PTSD experts from around the world to offer trauma survivors the most effective tools available to conquer their most distressing trauma-related symptoms, whether they are a veteran, a rape survivor, or a crime victim. Based in cognitive behavioral therapy (CBT), the book is extremely accessible and easy-to-use, offering evidence-based therapy at a low cost. This new edition features chapters focusing on veterans with PTSD, the link between cortisol and adrenaline and its role in PTSD and overall mental health, and the mind-body component of PTSD. This book is designed to arm PTSD survivors with the emotional resilience they need to get their lives back together after a traumatic event. Prolonged Exposure Therapy is an effective, highly flexible, and very well researched intervention to reduce the symptoms of PTSD across a variety of traumatized populations. The second edition of *Prolonged Exposure Therapy for PTSD: Emotional Processing of Traumatic Experiences, Therapist Guide*, along with the accompanying *Workbook*, provides all of the tools necessary for trained mental health providers to implement this first-line PTSD treatment with their patients. This model is individualized to address the needs of a variety of trauma survivors. Leaders in clinical practice, training, and research in the field of PTSD treatment, the authors have revised the *Guide* throughout to reflect the many advances in PTSD research that have occurred since the release of the first edition, including key adjustments to the underlying theory as well as additional evidence for modifications and individualization for more complex patient presentations and military populations. The *Guide* provides a concise but thorough description of the key components of the program, how to implement them, and when and how to consider adaptations.

Your child can overcome big emotions Anxiety, depression, stress, anger, and trauma are all thought to be adult related concerns. No one talks about how these big emotions, feelings, and events can have just as significant of an impact on children. Children are looked at as safe from these hard to overcome emotions. But, with constant exposure to news reports, violent games, social media, and crime in their own neighborhood, it is likely that your child may be struggling with these emotions without you even knowing it. Children often act out when they feel out of control. When they are trying to make sense of what they are feeling, these behaviors intensify.

Unfortunately, these behaviors are often chalked up to typical tantrums, the child only trying to get what they want, or the child seeking attention. The cause of the behavior is never really questioned. While it is typical for children to throw tantrums and fits every now and then, when these become more frequent and last longer than a few minutes, this is a clear red flag your child is struggling with some more. Children can suffer from depression, anxiety, and stress, among other intense mood disorders and emotions. Young children do not have the skillset to help them work through these problems on their own. It is no wonder why your child may be acting out if they are feeling confused and frightened by what they are thinking or feeling. As a parent, you want to help your child work through these big emotions and strengthen the skills your child needs to overcome these emotions in the future. That is where this book can help! In this workbook you will understand: What anxiety, anger, stress, trauma, and depression looks like in a child What skills your child may be lacking, which are adding to unwanted behaviors. How to properly open the lines of communication with your child to talk about what they are going through. What lifestyle change can best benefit you and your child. This book will also provide you with activities, games, and techniques that you and your child can do together to work through big emotions. Your child may have struggled in the past to communicate about what they are feeling and what is bothering them simply because they do not yet have an understanding of their feelings. Unwanted behaviors are never because your child wants to be bad. They are simply the only way they know how to cope and handle the big emotions they are experiencing. This book will help you recognize this behavior and how you can help your child make the necessary changes to help them overcome and properly express what they are struggling with. You and your child will gain a clear understanding of how to overcome big emotions, rewire negative thoughts, and maintain control in any situation from this book. If you have been trying to help your child with little to no positive results in the past, this book can provide you with the key tools that you may have been missing. If you are ready to see your child happy and thriving in any situation, then this is the book for you to get started with. Buy it NOW and let your customers get addicted to this amazing book.

This manual presents the first empirically studied, integrative treatment approach developed specifically for co-occurring PTSD and substance abuse. For persons with this prevalent and difficult-to-treat dual diagnosis, the most urgent clinical need is to establish safety--to work toward discontinuing substance use, letting go of dangerous relationships, and gaining control over such extreme symptoms as dissociation and self-harm. The manual is divided into 25 specific units or topics, addressing a range of different cognitive, behavioral, and interpersonal domains. Each topic provides highly practical tools and techniques to engage patients in treatment; teach "safe coping skills" that apply to both disorders; and restore ideals that have been lost, including respect, care, protection, and healing. Structured yet flexible, topics can be conducted in any order and in a range of different formats and settings. The volume is designed for maximum ease of use with a large-size format and helpful reproducible therapist sheets and handouts, which purchasers can also download and print at the companion Web page. See also the author's self-help guide *Finding Your Best Self, Revised Edition: Recovery from Addiction, Trauma, or Both*, an ideal client recommendation.

A quarter of adolescents engage in some form of self-harm and even experienced therapists can find working with these young people difficult. Based on Cognitive Behaviour Therapy (CBT), a highly effective method for working with emotional problems, *Cutting Down* offers a practical and accessible programme for mental health therapists from different professional backgrounds working with young people who self-harm. The programme is comprised of four parts, each covering a specific stage of therapy, and is split into 27 short modules. Although designed to be delivered over a course of 14 sessions, the programme is presented in a way that allows the therapist to decide which combination of specific modules is chosen and how long is spent on each, based on the specific clinical needs of the person they are working with. Throughout the programme, virtual patients are used to illustrate the various exercises and strategies. Part One, *What's Going On?*, introduces self-harm and CBT and aims to develop insight into feelings, problems, goals and the concept of change. Part Two, *Feelings, Thoughts and Behaviour*, looks at working on activities, managing depression and identifying and managing negative thoughts. Part Three, *Coping Strategies*, introduces modules on problem solving, assertiveness, mindfulness and alternatives to self-harm. Part Four, *On You Go!*, finishes up the programme with a review of goals, identifying triggers and developing a 'first aid kit' and a 'tool box' of skills to reinforce the programme. Downloadable worksheets enhance the practicality of the text. Designed to support clinicians working with adolescents engaging in self-harm, this unique workbook is ideal for counsellors, counselling psychologists, clinical psychologists, CBT therapists, IAPT practitioners, CAMHS mental health workers and nurse therapists as well as students and trainees.

Negative rumination plays a key role in the onset and maintenance of depression and anxiety--and targeting this persistent mental habit in treatment can lead to better client outcomes and reduced residual symptoms. Rumination-focused cognitive-behavioral therapy (RFCBT) for depression combines carefully adapted elements of CBT with imagery, visualization, and compassion-based techniques. Leading clinician-researcher Edward R. Watkins provides everything needed to implement this innovative, empirically supported 12-session approach, including sample dialogues, a chapter-length case example, reflections and learning exercises for therapists, and 10 reproducible client handouts. Purchasers get access to a Web page where they can download and print the reproducible materials in a convenient 8 1/2" x 11" size.

Print and use with clients right away!! Praise for 101 Trauma-Informed Interventions: "Linda Curran's unflagging energy and dedication to the healing of traumatized individuals has led to a voluminous, exciting, and comprehensive, 101 Trauma Informed Interventions. This workbook provides a plethora of effective tools -- traditional as well as innovative -- that can be used in whole or as a part of a course of therapy and also as self-help. The variety of options offered goes a long way towards dispelling the (unfortunately) popular misconception that there are only a limited number of interventions that help people to recover from trauma. Survivors as well as therapists who have been frustrated by the rigidity of strict adherence to evidence based practice will be greatly relieved to find a wealth of useful strategies to experiment, evaluate, and sort into a personally tailored trauma recovery program. This workbook is a god-send for the trauma field, expanding the possibilities for recovery in a most generous way." ~ Babette Rothschild, MSW author of The Body Remembers and 8 Keys to Safe Trauma Recovery "Linda Curran has carefully and knowledgeably curated a practical, effective collection of interventions that actually work for trauma survivors. Any clinician committed to helping those suffering from posttraumatic stress needs to have these tools and resources to draw upon, because standard talk therapy, nine times out of ten, is simply not going to cut it. These exercises will." ~ Belleruth Naparstek, LISW, author of Invisible Heroes: Survivors of Trauma and How They Heal "Drawing from the whole spectrum of trauma-based therapies, Linda Curran has compiled a sampling of practical exercises designed to help therapists and their clients better navigate the mine field that trauma work can be and find the path to healing." ~ Richard Schwartz, Ph.D. author of Internal Family Systems Therapy "101 Trauma-Informed Interventions provides an accessible functional "playbook" for therapists committed to the rehabilitation of the client with a trauma history. In a readable volume Curran integrates diverse approaches of treatment and emphasizes the unique role that trauma plays in mental health. Underlying this eclectic strategy is the common theme emphasizing that healing will only begin when the trauma related feelings embedded in the body are appreciated." ~ Stephen W. Porges, Ph.D., author of The Polyvagal Theory "An interesting compendium of potential interventions that can be interwoven into any therapist's existing conceptual framework" ~ Louis Cozolino, Ph.D., Pepperdine University, and author of 5 books including the best-seller The Neuroscience of Psychotherapy, Healing the Social Brain (2nd edition)
